

EuControls Announces Issuance of US Patent for Sensor Lighting Control System

March 9, 2017

LOS ANGELES, CA — EuControls Corp. (EuControls), an LED lighting controls company focused on development of LED control electronics, is excited to announce that the United States Patent and Trademark Office has issued US Patent 9,544,965, covering the invention of a sensor lighting control system that incorporates multiple passive infrared motion sensors and acoustic detectors, operating on a wireless mesh network such as ZigBee.

This proprietary technology is applicable to lighting control systems that rely on a mesh network coordinator or gateway for centralized schedule and rule based lighting management. EuControls has exclusive rights to the patented technology and plans to include it in future product offerings.
